

The Ruth Patrick River Garden

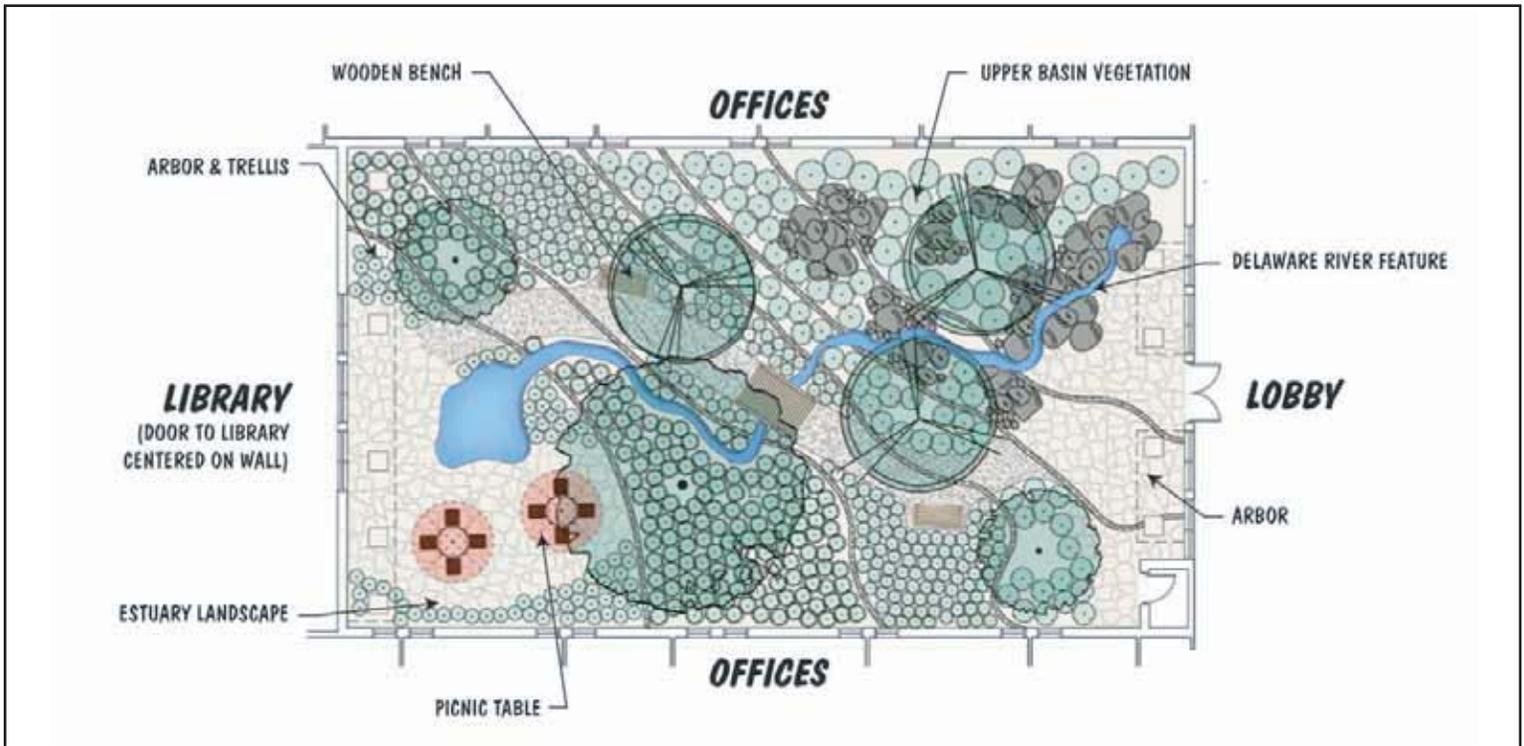

Existing Conditions and Proposed Plan

Current Appearance - DRBC courtyard (facing the lobby)

Conceptual Diagram - Based on the physiographic regions of the Delaware River Basin, the garden will represent the Delaware River from its headwaters to the bay.

Proposed Design - The water feature will be the centerpiece of the garden, filled sustainably by rainwater collected from the roof of the building. As the “river” flows downstream to the “bay” (from the lobby to the library), the rocks, soils, and vegetation used throughout the garden will represent the varying ecosystems the Delaware flows through naturally.
